Start from a known question

What are the core stages of the Enterprise AI Automation Framework?

How does AAIT implement AI-augmented incident triage?

What governance controls sit between an AI decision and an automated action?

DESIGN Propose an AI Solution architecture using the Enterprise AI Automation Framework.

RESPONSE

Governance Controls Between AI Decision and Automated Action

Control Stage Location

Governance controls are applied at **Stage 6 (Confidence/Governance)**, which sits between AI reasoning and execution 35.

Specific Controls Applied

The governance stage evaluates:

- **Confidence Level Assessment:** Determines whether the AI recommendation meets the organization's confidence threshold 3 4
- **Policy Compliance Verification:** Confirms the recommendation aligns with organizational policy requirements 3
- **Authorization Validation:** Verifies proper authorization is in place 3
- **Risk Threshold Validation:** Confirms identified risks fall within organizational risk tolerance 3
- **Audit Trail Documentation:** Prepares compliance and accountability records 3

Decision Branching Logic

Based on these controls, Stage 6 contains a **critical decision point** that branches into two mutually exclusive paths 3 5:

- **Automated Path:** High-confidence, policy-compliant recommendations proceed automatically without human intervention 4
- **Human Approval Path:** Recommendations failing to meet confidence thresholds or policy requirements are routed to human review 3 4

Both paths then converge at execution 3 4.

Summary

The governance controls function as a **confidence-based decision framework** that balances automation efficiency against risk management, ensuring lower-confidence or exceptional cases receive human scrutiny before execution 4.
